

# Self Service with Sisense: Data Exploration & Insights for All

## Business teams have data questions

With fresh data every day, business teams need analysis and insights. Getting those insights from a team of overworked analysts is known to require some smooth talking skills and a steady supply of lattes in order to prioritize those requests in a long backlog. But no matter how many lattes are given as incentives, there's just never enough time for analysts to prioritize everybody.

## Sisense Fusion shortens the time from question to answer

Sisense Fusion's drag-and-drop interface helps business teams access accurate and relevant data to answer their questions. With built-in AI to guide deeper exploration and minimize human error, analysts can go back to normal caffeinated levels and focus on their most strategic projects.

## Empowering business teams to become data superstars

- Visual-based data modeling and dashboard creation.

Point-and-click to create customized dashboards. This is data modeling made easy - select the data to get started on your data exploration journey to uncover powerful insights.

- Interactive visualizations with advanced filtering and drill pathways.

Get granular detail and answer second, third and fourth questions by exploring other dimensions of the data on a single visualization or the entire dashboard.

- AI-driven Data Investigation.

Guided by AI, teams can ask advanced questions in everyday language, explore answers with guided exploration paths, and receive alerts to ensure they never miss a beat.

- Integrated with workflows and business applications.

Access analytics from Sisense wherever your business teams live, to share insights and collaborate seamlessly to build a data-centric culture.
